Successful IML Grants: A Tale of Three Gardens
American Public Garden Association
Annual Conference
Hamilton, Ontario

Today's Agenda

- Introduction to IMLS
- IMLS Museum
Funding
Opportunities
- Q&A

Institute of Museum and Library Services

Reimagine the Future

About the Institute of Museum and Library Services

Who are we?

- IMLS is an independent federal grant-making agency and the primary source of federal support for the nation's approximately 123,000 libraries and 35,000 museums and related organizations.
- The Institute of Museum and Library Services (IMLS) helps ensure that all Americans have access to museum, library, and information services.

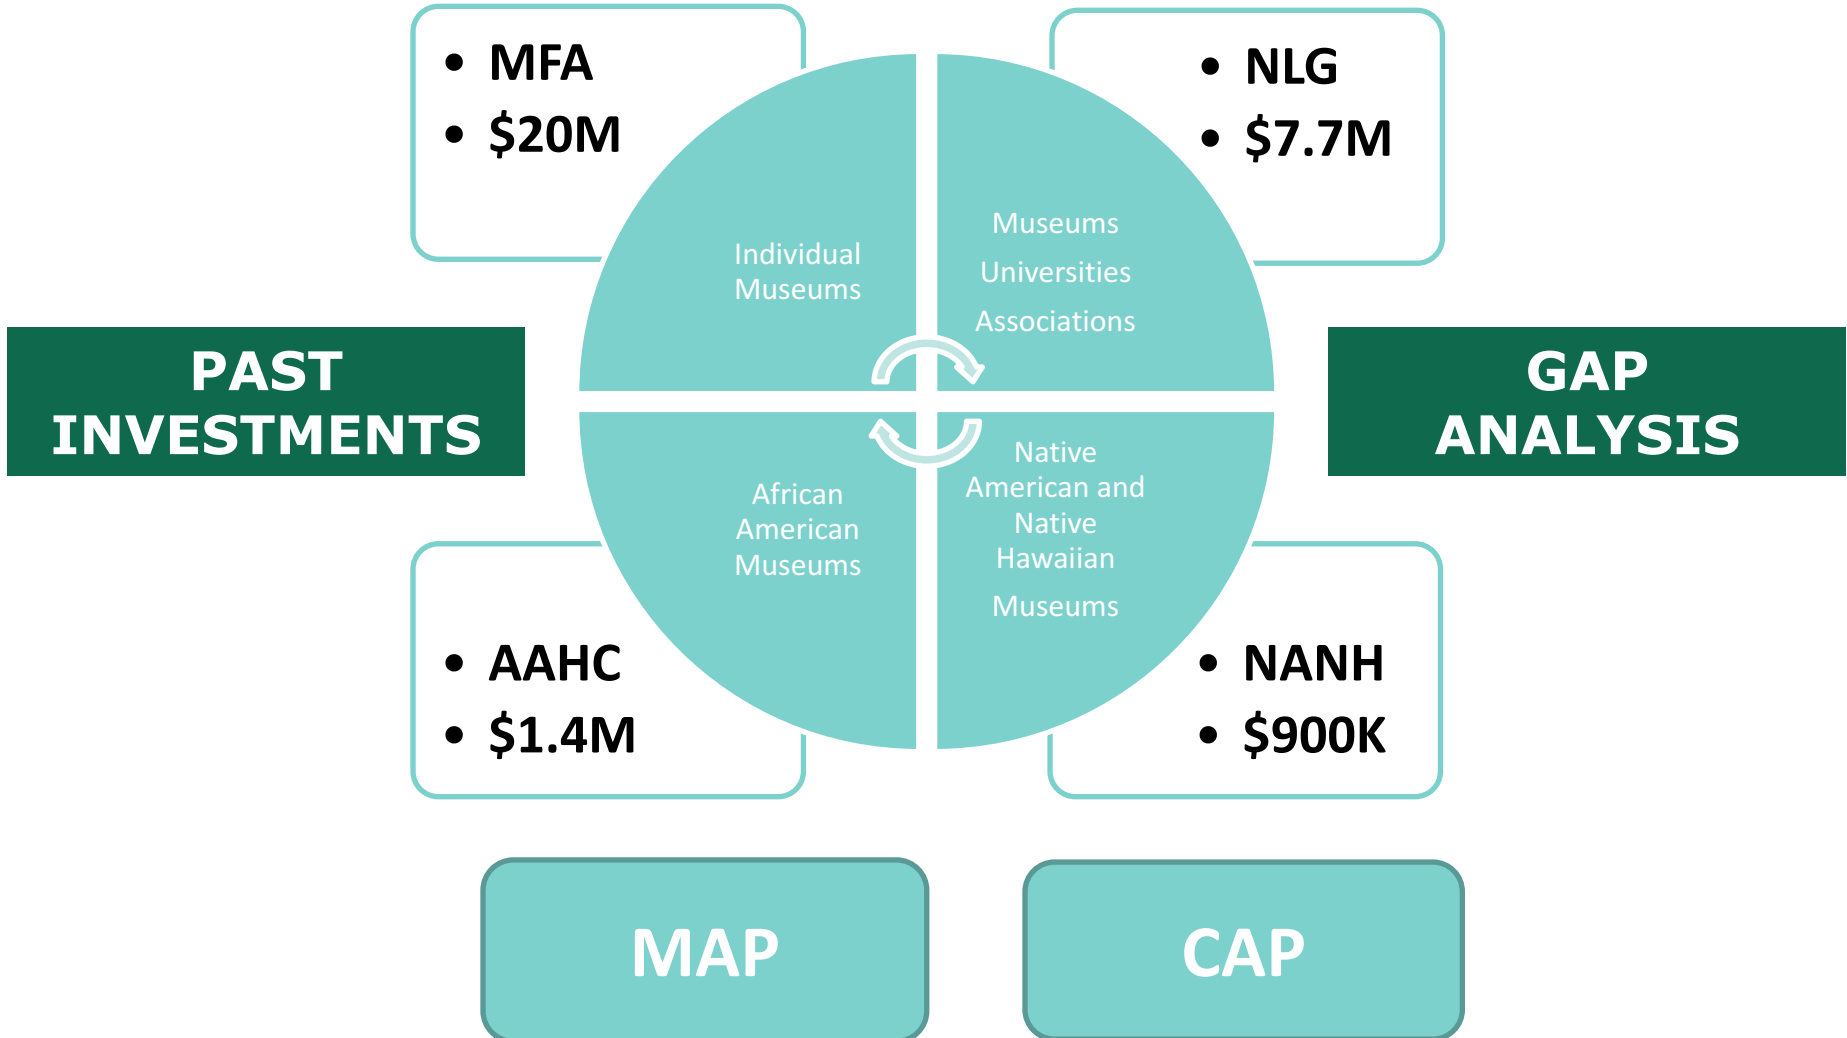

What do we do?

- We make **grants**, **convene groups**, **conduct research**, and **publish** in order to build the capacity of museums and libraries to serve the public.

A Comprehensive Strategy

Office of Museum Services Priorities

1.

- Museum Professional Development

2.

- Building Digital Capacity

Museum Funding Opportunities

1. Museums for America
2. National Leadership Grants for Museums
3. Native American/Native Hawaiian Museum Services
4. Museum Grants for African American History and Culture
5. Museums Empowered

Museum Grant Opportunities

	Museums for America	National Leadership Grants	Museums Empowered
Program Goals	To strengthen the ability of individual museums to serve the public	To address critical needs of the museum field and advance museum practice	To invest in professional development of museum staff
Project Categories	<ul style="list-style-type: none"> • Learning Experiences • Community Anchor • Collections Stewardship 	<ul style="list-style-type: none"> • Advancing Digital Resources • Collections Care & Access • Diversity & Inclusion • Professional Development 	<ul style="list-style-type: none"> • Digital Technology • Diversity & Inclusion • Evaluation • Organizational Management
Funding Levels	\$5,000-\$25,000 (no cost share)	\$5,000-\$50,000 (rapid prototyping; no cost share)	\$5,000-\$25,000 (no cost share)
	\$25,001-\$500,000 (1:1 cost share)	\$50,001-\$1,000,000 (non-research; 1:1 cost share)	
		\$50,001-\$1,000,000 (research; no cost share)	
Deadline	December 1, 2017	December 1, 2017	March 1, 2018

Characteristics and Eligibility

Museums for America And Museums Empowered	National Leadership Grants
Characteristics of Successful Proposals	
Institutional Impact	Broad Impact
In-depth Knowledge	In-depth Knowledge
Project-based Design	Innovative Approach
Demonstrable Results	Collaborative Process
	Shared Results
Eligibility	
Museums	Museums
	Higher Ed
	organization advancing museums and the museum profession

Museums for America (MFA)

Program Goal To strengthen the ability of individual museums to serve the public

Project Categories

- Learning Experiences
- Community Anchors
- Collections Stewardship

Deadline December 1, 2017

Funding Levels	\$5,000-\$25,000	\$25,001-\$500,000
-----------------------	------------------	--------------------

Cost Share	None permitted	1:1 required
-------------------	----------------	--------------

Activities can include:

- School and public programs
- Exhibitions
- Collections management
- Collections care
- Conservation
- Digital media development & delivery
- Publications
- Training
- Community outreach
- Audience research and evaluation
- Planning
- Database development
- Digitization

Museum Grant Statistics

2016 MFA Grants:

- Number of eligible applications: 506
- Total dollar amount requested: \$57,137,783
- Number of grants awarded: 206
- Total dollar amount awarded: \$21,149,000
- 41% of eligible MFA applications funded

2016 NLG Grants

- Number of applications: 60
- Total dollar amount requested: \$21,477,200
- Number of grants awarded: 13
- Total dollar amount awarded: \$5,185,106
- 22% of NLG applications funded

Recommended Next Steps

1. Visit www.imls.gov to select a grant program and verify your eligibility.
2. Read the Notice of Funding Opportunity carefully.
3. Check your organization's registrations with both SAM.gov and Grants.gov.
4. Connect with us
 - Participate in free IMLS webinars.
 - Talk with a program staff member at any stage.
5. Prepare your application. Make sure it's complete.
6. Submit **before** the deadline, December 1, 2017 (by 11:59 pm ET)

Helpful Links for Applicants

Successful IMLS Grants: A Tale of Three Gardens

Making Your Case

Linda Eirhart

Director of Horticulture, Senior Curator of Plants
Winterthur Museum, Garden and Library

American Public Gardens Association

Conference 2017

What was the difference?

- Better Planning
- More Details
- Complete

Make a solid case for support

- Why are you important?
- Why is project important?
- How will you implement project?
- How will you measure progress/success of project?

Why are you important?

- Who are you?

- What is your collection?

- Cultural/Historical significance

Why is the project important?

- How does it relate to your mission?
- How does it build on previous work?
- How will it be sustained?

How will you implement the project?

Detailed Plan

- Staff involvement
- Process/timing – do a trial run
- Quantify work

How will you measure progress and outcomes?

Winterthur Garden Sections with Plant Points

• Plants that have been mapped by Vandemark and Lynch and need updating.

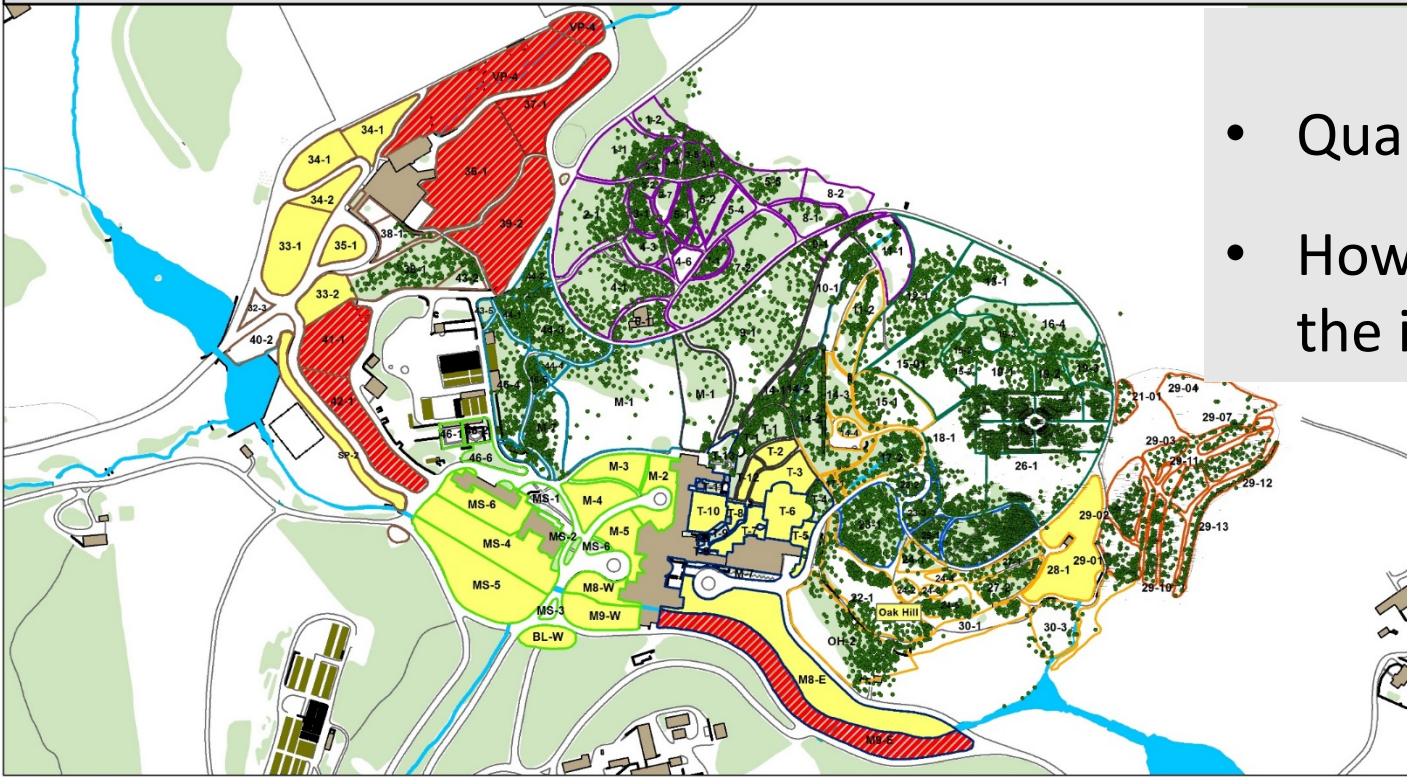

Sections that haven't been mapped since 1960's and need to be mapped.

Sections that are largely woodland. Only accessioned plants will be mapped.

400 200 0 400 Feet

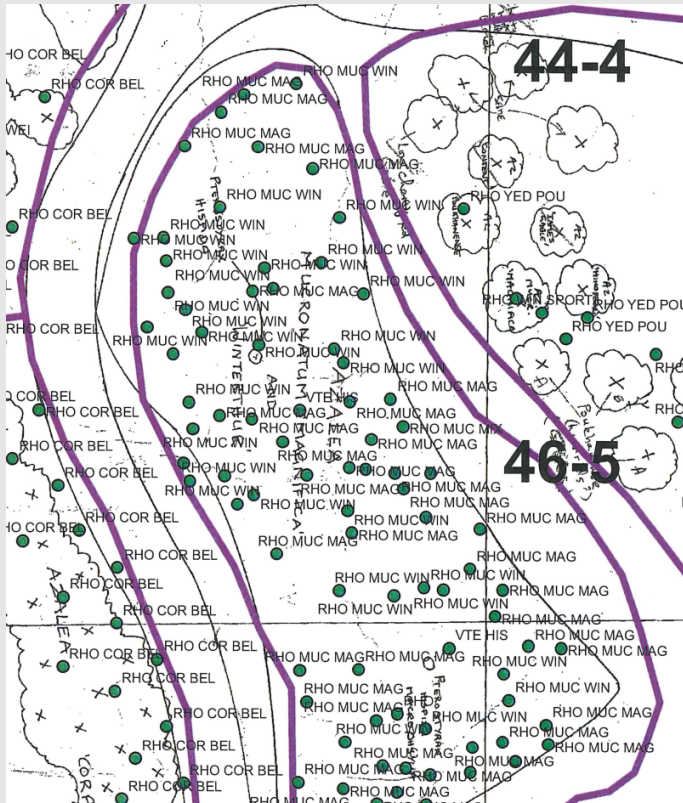

- Quantifiable
- How will you use the information

Review

- Why is your organization important/relevant?
- Why is this project important/relevant?
- How will you implement the plan?
- How will you measure progress/outcomes?

IMLS Direct Impact at Winterthur

- Plants digitally mapped in GIS
- Plant records updated
- Historic maps geo-referenced

IMLS Indirect Impact at Winterthur

- Elevated importance of garden collection
- Permanent GIS mapping specialist
- Staff commitment to plant records
- Aid in plant identification and historic design
- Plant Records Intern – career enhancement

Top Three Recommendations

- Project – selection and description
- Planning – importance of trial run
- Be Thorough – answer every question

Successful IMLS Grants: A Tale of Three Gardens

Bellevue Botanical Garden

Nancy Kartes, Garden Manager

American Public Gardens Association Conference 2017

Bellevue Botanical Garden

- Small garden with limited staff
- Must be very strategic about IMLS grant-funded projects

Identifying projects that are compelling and timely...

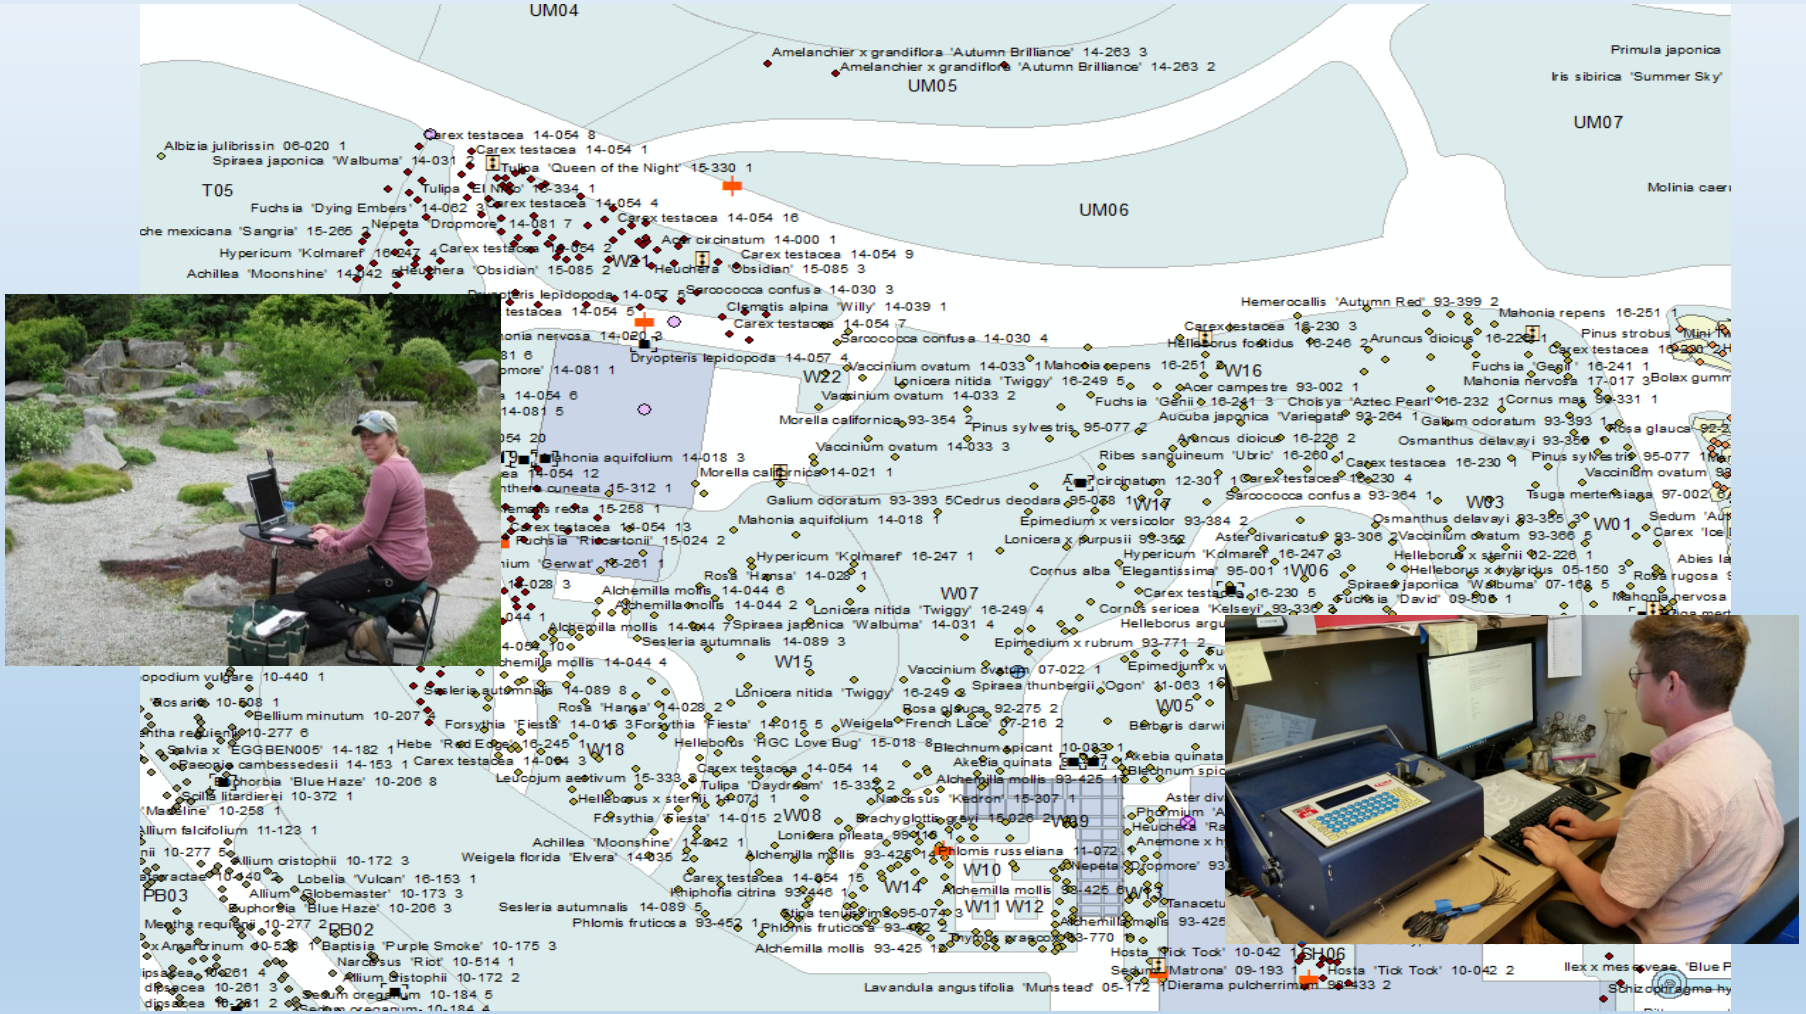

- IMLS grant projects must be integral to our strategic plan and current garden development.
- As grant writer and grant director, I have to be sure that I have capacity to successfully implement and manage the project for the duration of the grant.

IMLS Grants at BBG

- 2008 Update Master Plan
- 2009 Begin Visitor Center capital campaign, Apply for first IMLS grant
- 2010 - 2012 Collections Stewardship – laying the curatorial foundation
- 2013 Break Ground on new buildings
- 2013 - 2016 Learning Experiences – sharing information with the public
- 2014 New buildings open to public with new signage, interactive visitor map, and other tools provided by the grant
- 2015 Build content for interpretive signs and audio tour
- 2016 Evaluation phase
- 2017 Visitor Experience evaluation continues

2010 Collections Stewardship – laying the curatorial foundation.

2013 Learning Experiences – sharing information with the public

2013 Learning Experiences – sharing information with the public

Identify Projects That Align with IMLS Funding Objectives

- IMLS strategic plan
- Understand that they are responsible for measurable impacts of their grants

IMLS Objectives

Highlight: Connecting to Collections

Connecting to Collections is a call to action in response to the alarming findings of *A Public Trust at Risk: The Heritage Health Index Report on the State of America's Collections*, an IMLS-funded study that for the first time documented the state of the collections that museums and libraries hold in public trust. *Connecting to Collections* prioritizes safe conditions for collections, emergency plans, accountability, and leveraging private and public sector support.

Highlight: Digital Collections and Content

Working with the nation's top researchers and digital curators, the University of Illinois at Urbana-Champaign has developed a test bed

Objectives:

Support the care and management of the nation's collections, both material and living, to expand and sustain access for current and future generations.

Develop and implement a nationwide strategy to expand the public's access to the information, meaning, and content found in museum and library collections.

2012 IMLS - Engaging Communities

Build on: IMLS-CS grant work

updated, verified data

upgraded delivery tool (on-line searchable data base)

Summer 2012 (capstone)

Explore
4 Culture Grant
12/12 for M13

- 21st Century Learner
- Life-long, informal learning
- Engage visitor as engaged community as partner
- Advance content-based learning programs

Next Steps:
for Ed/Interp.

- Use data to create story
- gather historical info " " (UW Museology student project) cost share
- audience analysis (and history Dept idea)
- content development
- Archive plan/digitizing development & implementation (UW Information Sciences project) cost share
- Research & procure equipment (IMLS Funding) for electronic delivery on-site (electronic wall, add'l stand alone stations)
- Create signage about how to access (cost share) info on cell phones/lpads/etc.
- Cell phone tour signs & handouts (IMLS)
- Develop "visitor friendly" versions of atlases for access electronically/maps to specific areas of interest. (UW GIS project) cost share

Scientific audience
w/ delivery
in various
formats
& languages

Partner w/EHC?

Strategic plan : grant work begin in Aug 2013

conduct research, archive, content dev. etc.
while VC under construction - 2 yrs (phase 3 projects over time)

All deliverables ready to roll out Fall 2013
w/or in advance of building opening

Grant Deadline: ~~October 2012~~
January 2013

Do: Develop project outlines
contact UW museology
UW info. sciences
UW GIS
etc. } Letters of support/commitment

Develop grant budget
Est. BB&S project "champion"

Fall

BBG – education/interpretive program logic model draft

Situation: BBG needs to provide multiple layers of visitor engagement with plant collections, horticultural practices, and BBG story without detracting from beauty or garden design.

Assumptions:

- Some visitors come to BBG to learn about plants, gardening, and the BBG story
- Some visitors come to BBG to enjoy the beauty, seek respite, and/or get fresh air and exercise in a healthy, beautiful setting
- Some visitors come to BBG to socialize and/or connect with others who share their interest in gardens and gardening.

Inputs	Activities	Outputs	Outcomes

Program participants</p> <p>x # docent training hours</p> <p>x photography permits</p> <p>% plants in collection that are Great Plant Picks</p>	<p>ST – Garden visitors use the Garden as a resource for information about best plants and gardening practices for Northwest gardens.</p> <p>LT – Inspired, informed, engaged citizens, visitors and volunteer s who express creativity, learn new skills, and enjoy the outdoors (COB outcome)</p> <p>LT – We are a nation of learners with 21st Century skills, with cultural institutions that provide informal learning experiences that are inclusive and accessible. (IMLS outcome)</p> <p>LT – Vibrant, beautiful communities that support a healthy ecosystem. (BBG vision)</p>

Impact

- Plant Records systems now in place to help us stay current
- Foster a culture of evaluation and continuous improvement
- Help us achieve our mission - Current Visitor Survey Results: 97% of visitors surveyed perceive the Garden as a resource for information about best plants and gardening practices for Northwest gardens.

Nancy's Top 3 Suggestions

- Confirm everyone on the project implementation team has capacity to devote the correct time to the project for the duration of the grant. Success will depend on everyone doing their part at the right time.
- Remember that you will be accountable for project performance measures and cost share obligation - so draft them with care and forethought.
- Read and heed peer reviewer comments.

First, listen; then, write. Finally, WORK.

Or, one man's experience with the IMLS.

Cycads: A model group for *ex situ* plant conservation

Endangered *Dioon spinulosum* with near mature female cone

Public gardens collectively cultivate, study and protect at least one-third of Earth's plant diversity. One in five plant species now faces extinction, and many species already survive solely in "off-site" *ex situ* living collections. The global safety net of gardens which serves to prevent plant extinction is rapidly growing in breadth and depth, and at least one-third of threatened species are reported in living collections today.

To meet the goals of the Global Strategy for Plant Conservation, the plant conservation community can leverage their collections to build integrated plant conservation programs. Using existing *ex situ* plant diversity as a foundation, public gardens are increasingly working together to build genetically diverse living collections as a global safety net against plant extinction.

Cycads are the most threatened plant group in the world. They face considerable conservation challenges.

Zamia lucayana survives on just one beach habitat on one island

Montgomery Botanical Center
Modeling the Cost of Conservation

Narrative of Proposal

Assessment of need

Just months ago, the MSLS completed an important National Tour, centered on the nation's living collections. A keynote piece of our collections heritage is the nation's living collections, which were the subject of an in-depth forum held in San Diego in early 2009. A key theme brought out during this forum is the high value for conservation represented in our living collections. The salient crisis remains the accelerating, unprecedented loss of the world's living diversity – extinction of species and populations continues.

During this same time span since the living collections forum – from early 2009 until now – the nation's collections have seen an intense shortage of the staffing and resources needed to care for this national living collections heritage. The fiscal squeeze has prompted an ongoing quest for the absolute greatest efficiencies in living collections management.

Living collections are very well established as an essential part of species conservation. Investment in these living treasures is essential, but resources are scarce. Therefore, a clear understanding of the relationship between investment and outcomes is necessary. While large efforts have been made in conserving biodiversity in living collections, the efficiency of this work has not been closely examined.

Developing a set of metrics for measuring conservation value of living collections, applying the most advanced tools for gathering these metrics, and placing these data within an easily understood context of resource investment vs. conservation outcomes will satisfy this need. The tools, methods, and models developed through this project will allow living collections to apply efficiency models to the conservation operation. This will allow each dollar invested in conservation to have the greatest possible outcome.

Audience needs and benefits

Briefly stated, botanic gardens need a clear yet robust model demonstrating the relationship between investment and outcomes with regard to collections conservation work. This project will benefit botanic gardens by enabling realistic and pragmatic budgeting to be as effective as possible in achieving conservation goals.

Meeting conservation goals in an effective and efficient manner is important for all living collections. For zoos and aquaria, there has been significant research that can be directly applied, mostly in the area of minimum viable population studies (DeSalle and Amato, 2004). Population and metapopulation management plans for living animal collections have had a moderate level of development. The current research will produce a broadly applicable model to enable exploration of the relationship between investment and conservation outcomes for plant collections.

Following the successful example of 2005, botanic gardens increasingly work to cultivate rare plant species for the purpose of *ex situ* conservation. Strategies for conserving living plants vary among and within garden collections (Wyse Jackson & Sutherland, 2000; Anonymous, 2002; Havens *et al.*, 2004a, 2004b; Farnsworth *et al.*, 2006). Much progress has been made among

Montgomery Botanical Center
Modeling the Cost of Conservation

Preliminary model

Underway at MBC has produced a preliminary model for exploring the relationship between collections efficacy, cost, and efficient application of resources. For the study, we explored the population genetics of an extensive living collection of Keys *Miconia moritzii*, derived from a single collecting event on Big Pine Key, and compared the population collection and the wild population. Through a method of structured randomized genetic data, we modeled the effective conservation value of living collections sizes (Figure 1, below). This work was designed to inform sampling and collecting work.

The data is consistent with: 1) collections of more than one individual conserve genetic diversity; 2) as collection size increases, the increase in genetic capture increases; and 3) there is a point at which increased investment in a collection (as plants maintained) does not appreciably increase the conservation value of the study. This relationship was well described by a logarithmic function. This is the "collection conservation curve."

Effective genetic capture of a botanic garden living collection is graphed against the number of individuals in the collection. The graph shows the law of diminishing marginal returns (on the y-axis) as the investment (in numbers of plants) increases.

Figure 2. The relationship between conservation collections investment and outcomes. Graph A demonstrates that there is an optimum number of plants to maintain to reach an efficient "unit cost of conservation" (see text).

Montgomery Botanical Center
Modeling the Cost of Conservation

Figure 2 shows the relationship between investment and outcomes. Graph A demonstrates that there is an optimum number of plants to maintain to reach an efficient "unit cost of conservation" (see text).

Figure 2, below) can be represented as an easily understood context of resource investment vs. conservation outcomes will satisfy this need. The tools, methods, and models developed through this project will allow living collections to apply efficiency models to the conservation operation. This will allow each dollar invested in conservation to have the greatest possible outcome.

Narrative of Proposal

ASSESSMENT OF NEED

Living collections are an essential element of robust conservation programs. Recently the DMLS completed an important National Tour centered on the nation's collections. A central piece of collections heritage is the nation's living collections, which were the subject of an in-depth DMLS forum (Connecting to Collections) held in San Diego in 2009. A key theme developed during this forum is the high conservation value represented in the USA's living collections. The salient crisis remains the accelerating, unprecedented loss of the world's living diversity, driven by the extinction of species and populations.

Resources are limited. In the time since the DMLS living collections forum - from early 2009 until now - the nation's collections have also seen an alarming shortage of the staffing and resources needed to care for this national living collections heritage. The fiscal crisis has prompted an ongoing quest for the absolute greatest efficiencies in living collections management.

Therefore, a clear understanding of the relationship between investment and outcomes is necessary. Investment in these living conservation collections is essential, but resources are scarce. While large efforts have been made in conserving biodiversity in living collections, the efficiency of this work has not been closely examined.

Developing a set of metrics for measuring conservation value of living collections, applying the most advanced tools for gathering these metrics, and placing these data within an easily understood context - resource investment vs. conservation outcomes - will satisfy this need for clear understanding. Tools, methods, and models developed through this proposed project will allow application of efficiency models to the conservation operation. A clear, easy-to-interpret model based on targeted research will allow all botanic garden users to perceive the important relationship between cost and benefit for conservation collections. This model will allow each dollar invested in living collections to have the greatest possible conservation outcome.

AUDIENCE NEEDS AND BENEFITS

Briefly stated, botanic gardens need a clear yet robust model demonstrating the relationship between resource investment and conservation outcomes. This project will benefit all botanic gardens, as the models developed will enable realistic and pragmatic budgeting to be as effective as possible in achieving conservation goals. Meeting conservation goals in an efficient manner is important for all living collections. For 2005 and aquaria, there has been significant research that can be directly applied, mostly in the area of minimum viable population models (DeSalle and Amato, 2004). Population management plans for living animal collections have had a moderate level of development. The project proposed here will produce a broadly applicable model to enable exploration of the relationship between investment and conservation outcomes for plant collections.

As with zoos, botanic gardens work to cultivate rare species for the purpose of *ex situ* conservation. Strategies for conserving living plants vary among and within garden collections. (Wise Jackson & Sutherland, 2000; CBD, 2002; Havens et al., 2004a, 2004b, 2006; Farnsworth et al., 2006). Much progress has been made among moderate level of development. The project proposed here will produce a broadly applicable model to enable exploration of the relationship between investment and conservation outcomes for plant collections.

As with zoos, botanic gardens work to cultivate rare species for the purpose of *ex situ* conservation. Strategies for conserving living plants vary among and within garden collections. (Wise Jackson & Sutherland, 2000; CBD, 2002; Havens et al., 2004a, 2004b, 2006; Farnsworth et al., 2006). Much progress has been made among moderate level of development. The project proposed here will produce a broadly applicable model to enable exploration of the relationship between investment and conservation outcomes for plant collections.

This project will have broad application. This project will be widely disseminated, for a robust national impact. By clearly highlighting the relationship among genetic diversity, collection size and resource investment for living plant collections, this model will increase our collective national ability to advance conservation goals relative to capacity. Any garden with recent or long-standing programs in living conservation collections will more efficiently reach their goals through the models developed here.

A diverse, nationwide group of botanic gardens anticipate direct benefit from this project. Please see Supporting Document 1 for comments from the botanic garden community.

ASSESSMENT OF NEED

Living collections are an essential element of any robust conservation program. Recently the DML completed an important National Tour centered on national living collections, which were the focus of an in-depth DMLS forum (Connecting to Collections) held in San Diego in 2009. A key theme developed from this forum is the high conservation value represented in the USA's living collections. The salient critical issues are the accelerating, unprecedented loss of the world's living collections form - from early 2009 until now - as the staff and resources needed to care for the living collections have also seen a significant decline. While large efforts have been made in conserving biodiversity in living collections, efficiencies in living collections management.

Therefore, a clear understanding of the relationship between investment and outcomes is necessary. Living collections are well established as an indispensable part of any conservation program. Investment in these living conservation collections is essential to achieve the most advanced outcomes in living collections management. Resources are scarce. While large efforts have been made in conserving biodiversity in living collections, efficiencies in living collections management.

Developing a set of metrics for measuring conservation value of living collections within a conservation context - resource investment vs. conservation outcomes - will satisfy this need for clear understanding. A clear, easy-to-interpret model based on targeted research will allow application of this model to various living collections. This model will allow each dollar invested in living collections to have the greatest possible conservation outcome.

AUDIENCE NEEDS AND BENEFITS

Briefly stated, botanic gardens need a clear yet robust model demonstrating the relationship between investment and conservation outcomes. This project will benefit all botanic gardens, as the model will enable realistic and pragmatic budgeting to be as effective as possible in achieving conservation goals for all living collections. Field Review Criteria
Museums for America - Museums Empowered

PROJECT JUSTIFICATION

- Is the project clearly explained?
- Is the need, problem, or challenge to be addressed clearly relevant evidence?
- Are the people who will benefit from the project clearly involved in planning the project?
- Are the ways in which the project advances the institution's mission, actionable, and measurable?
- Does the project align with the goals of the Museum Empowered to build the internal capacity of museums through professional staff?

PROJECT WORK PLAN

- Are the proposed activities informed by appropriate goals, assumptions, and risks clearly stated?
- Are the goals, assumptions, and risks clearly stated?
- Are the proposed evaluation activities and performance project? Will they result in valid, reliable, and generalizable data?
- Do the identified staff, partners, consultants, and other resources necessary to complete the work successfully?
- Is the schedule of work realistic and achievable?
- Are the time, personnel, and financial resources allocated to the project?
- Is a clear methodology described for tracking the progress of the project when necessary?
- Is there an effective plan for communicating results?

PROJECT RESULTS

- Is the plan for collecting and reporting data clearly articulated?
- Are the project's intended results clearly articulated and linked to the need, problem, or challenge addressed?
- Is the plan to effect meaningful change in knowledge, skills, or attitudes solidly grounded and appropriately structured?
- Will the tangible products be useful?
- Is there a reasonable and practical plan for sustaining the conclusion of this award?

Panel Review Criteria
Museums for America – Museums Empowered

Does the project meet the goals of Museums Empowered special initiative and one of the focus areas?

- Strengthens the ability of an individual museum to serve its public through professional development for museum staff
 - Digital Technology: for museum staff to fully explore, understand, and optimize use of digital technology in museums
 - Diversity and Inclusion: for museum staff to explore proactive and inclusive ways to invite, engage and strengthen ties with diverse communities
 - Evaluation: to expand museum staff's evaluation capacity in audience research and program evaluation
 - Organizational Management: for museum staff to learn best practices in organizational management, strategic thinking, innovation and managing change

Is the project poised for successful implementation?

- Demonstrates thorough understanding of relevant issues and current practices
- Addresses an assessed need
- Allocates resources for the successful completion of the project
- Connects goals and objectives to appropriate activities and intended outcomes

If funded, will the project achieve its intended results?

- Tracks, measures, and adapts in order to achieve desired outcomes
- Generates continuing benefits for applicant and/or audience served

Application Overview

Share your overall impressions of the application and general comments that do not fall into one of the above categories. You will select a numeric score for the application in this section.

Panel Review Criteria at a Glance
National Leadership Grants for Museums

Does the project meet the goals of NLG-Museums and the project category under which it was submitted?

The distinguishing features of NLG-Museums projects are broad impact, innovation, and collaboration. Exemplary projects:

- address a current need of the museum field
- advance practice in the museum profession
- demonstrate the potential for far-reaching impact
- strengthen museum services to benefit the audiences and communities being served
- reflect awareness and support of current strategic initiatives and agendas in the field
- align with the goals of the project category under which it was submitted:
 - **Learning Experiences:** IMLS supports museums in providing meaningful knowledge and enhanced inquiry skills for people of all ages and backgrounds. Successful projects will help the museum field provide high-quality, inclusive educational opportunities that address particular audience needs. We encourage projects that are based upon current research in cognitive and behavioral science as well as best practices developed in museums and other informal learning environments.
 - **Community Anchors:** IMLS promotes the role of museums as essential partners in addressing the needs of their communities by leveraging their expertise, knowledge, physical space, technology, and other resources to identify and implement solutions. By strengthening museums' capacities for civic engagement, these projects contribute to the creation of livable, sustainable communities. Successful projects will help the museum field to be highly collaborative, adopt co-creating strategies, and engage with a wide variety of stakeholders to accomplish a sustained collective impact goal.
 - **Collections Stewardship:** IMLS supports exemplary management, care, and conservation of, as well as broad access to and use of, museum collections. IMLS welcomes applications for projects that help the museum field address state-of-the-art collections care and collections-information management, curation, preventive conservation, conservation treatments, database creation and enhancement, digitization, and the use of digital tools to facilitate discovery and deepen engagement with museum collections.
- align with the goals of the funding category: non-research, research, rapid prototyping

Is the project poised for successful implementation?

- Demonstrates thorough understanding of relevant issues and current practices
- Addresses an assessed need
- Allocates resources for the successful completion of the project
- Connects goals and objectives to appropriate activities and intended outcomes

If funded, will the project achieve its intended results?

- Tracks, measures, and adapts in order to achieve desired outcomes
- Generates continuing benefits for the museum field

Strengthening the conservation value of ex situ tree collections

NICOLE CAVENDER, MURPHY WESTWOOD, CATHERINE BECHTOLDT
GERARD DONNELLY, SARA OLDFIELD, MARTIN GARDNER
DAVID RAE AND WILLIAM MCNAMARA

Introduction

Abstract With 10% of trees (> 8,000 species) threatened with extinction there is an urgent need for botanical gardens to protect threatened trees in dedicated conservation collections. Species conservation is mentioned in the mission statements of most major botanical gardens, yet the actual conservation value of existing ex situ tree collections is low. We conducted interviews with members of the botanical garden community and organized a symposium at the 2012 Global Botanic Gardens Congress to identify challenges and collect recommendations to improve living ex situ tree collections. We summarize and evaluate this information to facilitate gardens becoming more effective agents for global tree conservation. Experts agree that gardens offer valuable strengths and assets for tree conservation. Some challenges exist, however, including a lack of strategic conservation focus, collection management limitations, gaps in fundamental biological information for trees, and a lack of global coordination. Solutions are offered to facilitate gardens and arboreta of all sizes to participate more effectively in tree conservation. Prioritizing genetically diverse tree collections, participating in conservation networks, developing tree-specific conservation models and guidelines, and strengthening tree science research efforts are a few examples. Most importantly, a more coordinated global effort is needed to fill knowledge gaps, share information, and build conservation capacity in biodiversity hotspots to prevent the loss of tree species.

Keywords Arboretum, botanical garden, ex situ, Global Strategy for Plant Conservation, Global Trees Campaign, in situ, integrated conservation management, tree conservation

- A. Write for the community.
- B. Understand the review process.
- C. Make a clear connection to a broader context.

- 
- A tropical landscape featuring several tall palm trees in the foreground and a dense grove of palm trees in the background. The sky is a clear, bright blue with a few wispy white clouds. The sun is visible on the right side, partially obscured by a palm tree, creating a lens flare effect. The overall scene is bright and sunny.
